After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Hello Dennis,

I would offer a input on one of your wants. The Stoner 80-10 never made
it into production, however, KLM bought a private label of it called the
Force 5. I have the manual for the Force 5 and some Cubic manuals of
the 150 which was the parent design for both.

The rec.radio.info newsgroup, first established in 1993, has been
recently revived by an active moderation team. We are currently seeking
suitable information, FAQ, and bulletin articles from the entire
rec.radio.* newsgroup hierarchy for simultaneous cross-posting to our
newsgroup.

We are seeking a replacement maintainer for the following information
bulletin formerly posted to rec.radio.amateur.* (and currently archived
at http://www.faqs.org/faqs/radio/personal-intro/ ):

Subject: Guide to the rec.radio Newsgroups
Maintainer: jeffreyh@Hawaii.Edu (Jeffrey Herman)
Last Posted: 9 Nov 2001 06:18:17 GMT

One significant omission, requiring immediate updates, for this article |
is that it does not mention newer amateur radio newsgroups created since |
it was written, including: |

rec.radio.amateur.antenna |
rec.radio.amateur.boatanchors |
rec.radio.amateur.dx |
rec.radio.amateur.equipment |
rec.radio.amateur.homebrew |
rec.radio.amateur.moderated |
rec.radio.amateur.space |

We are willing to provide any technical support necessary to get this
article updated and automatically posted again at a regular interval.
This would include establishing contact with the original maintainer for
any necessary permissions. We would prefer to seek a new, dedicated
maintainer at this time, rather than start auto-posting the original
article ourselves.

Anyone using this combination? The headphone works fine, but I have some difficulties using the microphone. I've used an 8 kOhm resistor for the bias, and as soon as a noise or my voice triggers VOX, it won't release it. Since accessing vox/antivox pots in the ts450 is a pain (who the hell thought of putting them on the underside of the radio, seriously?), I'd like to know if someone is happily using the microphone before I dismount half the shack to be able to get at the pots.

Thanks

30. FS: Brand new digital DC-4 GHz step attenuator

Hello everyone,

I have a Mini-circuits RF digital step attenuator with the following specs for sale. It has NEVER been used (not even mated once)!

Model: ZX76-15RS-PP+
Frequency range: DC - 4 GHz
Control: Parallel 5-bit control in 0.5 dB increments (0.1 dB accuracy typical)
Range: 15.5 dB
Interface: SMA
The control cable and CD comes with it (ZX76-WP+). Find it on page 10 of the below PDF.

Here is a link to the datasheet:
http://www.minicircuits.com/pdfs/ZX76-15R5-PP+.pdf

Currently retails for $73.95 for the attenuator and $22.95 for the cable ($96.90 total).

Asking $60 shipped for everything since it is brand new. According to my invoice it cost $108 shipped to me, so my loss is your gain!

Willing to take reasonable offers, but no low-balling please.

No. but you can download the manual from the Boat Anchor Manual Archive
at http://bama.edebris.com/manuals/ for free. Installation instructions
are terse and they assume some previous experience in working on radios.
An older ARRL Handbook or RSGB manual will explain how a Q-multiplier
works and where they should be attached in the receiver. If you have
other questions, it is best to ask them on the Usenet
rec.radio.amateur.boatanchors newsgroup.

has a very nice discussion of how they work, with a couple of

Ken,

A word to the wise... The alt.ham-radio newsgroups essentially have no
traffic. The correct place to list radio items for sale is the
rec.radio.swap Usenet group.

Thank you, Dave Platt for your kind reply. I will download the manual

Mark-

1. Microphone picking up sound of a fan.
2. Microphone magnetically coupling to power transformer or fan.
3. Bad shield connection on microphone cable.
4. CW Key plugged-in and keyed.
5. Monitor feature activated, providing audio feedback.
6. PL tone activated.

Try using the microphone as a "probe" to locate source of the tone.

7. Decoupling/filter capacitor in V+ line to audio amplifier is bad,
allowing audio to couple back to earlier stage that shares the same V+
source. Oscillation is sometimes in the form of "motorboating", a low
frequency relaxation oscillation.

In my opinion - that is kind of over kill.
You can buy a decent bubble pack GMRS Motorola radio for under $120 a set.

You must remember that reception for UHF is line of sight and unless you have a clear view of the repeater and permission to use it - your handi talkie is not going to transmit or receive any further then a $40 Motorola walkie talkie in the woods.
The trees absorb the signals and the signals will not go up one hill and down the next - nor will it shine up over one mountain and down the next.

The limitations are the size of the battery, the size of the antenna - since all signals reduce at the square of the distance away from the transmitter.

Most of those radios do not come with a 16 inch antenna which is what it would need for the bare minimum amount of transmit and receive power on those frequencies.

If you're in the field away from commercial power, you'll either need carry
a stock of alkaline batteries (and make sure you have a battery pack for
your HT that can take them), or have some other way to charge whatever sort
of rechargeable cells you choose.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

52. Battery charger/maintainer for flooded deep-cycle batteries?

I'm looking for charger/maintainer -- either an off-the-shelf unit or a schematic so I can build my own -- suitable for a flooded deep-cycle battery, either a pair of 6V "golf cart" batteries in series or a Group 31.

I don't want an RFI generator: I already have one.

I already have a few 13.8V 25A power supplies, one of which I would be quite willing to "crank up" to a higher voltage to compensate for the voltage drop in the control circuitry.

Something like the West Mountain Radio "Super PwrGate" (PG40S) would work, although the automatic switch-over feature is not essential. That device is intended for Gel-Cell and AGM batteries and not recommended for flooded batteries -- absorption-charge voltage too low and float-charge voltage too high, their tech support people tell me.

I am quite happy with my IOTA DLS-45 with the IQ Smart Controller

http://www.iotaengineering.com/iq.htm

Once a week it equalizes my batteries using 14v pulses. The batteries are
on their 14th year and can still run my shack for 5 days. (down from a
week when I initially purchased the batteries and charger)

I wish I'd known about that IQ unit before I bought an Astron RS-35A
just a month or two back.

I was hoping I could find something not too expensive to take power from
that P/S or from one of my RF-quiet "switchers" to look after the
batteries. Texas Instruments has battery-charging ICs, but I haven't
seen a practical circuit that uses one.

Hey OT:

I used to charge a deep cycle flooded marine battery with the TI
UC3906
data sheet here: http://focus.ti.com/lit/ds/symlink/uc3906.pdf
all you need is a few precision pots and the low resistance resistor
you need to set the max charge current.
I had a 115AH deep cycle flooded marine battery that with a straight
no frills charge took 4 days to charge fully, tested by hydrometer
With 1 foot of 14 gauge wire for the max charge resistor and precision
10 turn pots to set the other settings, and a 30 amp PNP pass
transistor on a fan cooled heat sink I was able to charge that battery
in 8 hours full charge, then it goes to a maintain charge, not a
trickle charge.

Basically I was charging at 23 amps after the UC3906 checked that no
cells were bad, then once it gets to a predetermined voltage it scales
back the charge, all the levels for this are set by multiple precision
pots and you can take it thru 4 levels of charge. I had the max
setting for 15.5 volts when the battery was fully charged to roll back
to maintain charge.

You will need a unregulated 18 volt supply, because the PNP drops 4
volts in VSAT. and once it gets the battery up there in voltage, the
PNP doesn't need to be full on in VSAT

After using auto chargers and straight charges I found the UC3906 the
best choice over all.

There is a switch mode TI chip also but you don't want that one

Mouser stocks these last time I bought them it was like $4 each.

You do not need anything too fancy...
to "float" the batteries all you need to do is keep them at approx 2.25
volts / cell...so it's possible that your 13.8 v charger will do the job...

You can test it by checking the total voltage after a 24 hour period...

ideally, a 12v battery should float at about 13.5 volts.

If the float voltage is a little higher or lower it won't be too
critical...but make sure it's well below the 14.2 v gassing point.

I've been in the lead-acid battery business for 36 years...
so have quite a bit of long term empirical data

Hey OM:

All well and good but taking the battery up to 15.5volts is ok as long
as you keep adding water and have a well vented area to charge them
in. I tried a tested and true way of not going over 14.2 volts took to
long to get the full charge you can check it with a hydrometer and see
that best you can get is 80% of full charge going with 14.2 volts.

With a 18volt unregulated supply and the VSAT of 4 volts the max
charge current voltage can only be 14.00 volts period
you have to take it up to 15.5 volts to get the full charge period.
been there done that.

West Mountain Radio claims that their "Super PwrGate" has a voltage drop
of only 0.3V to 0.4V, so they can charge a Gel-Cell battery from a 13.8V
P/S or can handle an AGM battery simply by raising the P/S voltage to
14.1V. Any idea what they use for a pass transistor?

The "Micro M+" solar battery charger described in some recent editions
of the ARRL Handbook uses the STP80PF55 P-Channel MOSFET
(80 Amp, R[DSon] = 0.016 Ohm) as the control device. Could this be used
in conjunction with the UC3906 without too much difficulty?

That's the entire point of float charging a battery...
you do not have to add water and you do not have excess hydrogen
production...in "normal" charging...the battery voltage would rise to
approx 15volts during the last 20 minutes or so of charge

The OP specifically said he wanted to float charge

The West Mountain Radio people told me that their "Super PwrGate"'s
13.5V float setting voltage (not adjustable) might be too high for a
flooded deep-cycle battery. Their user manual refers users to

www.windsun.com/batteries/battery_FAQ.htm

which recommends per-cell float voltages flooded deep-cycle batteries
that translate to 13.02V to 13.20V for a 6-cell battery.

Oops! I was writing from memory and got it wrong: West Mountain Radio specify cranking the P/S up to 14.1V for Gel-Cells and to 14.5V for AGM batteries -- to allow absorption-charge voltages of 13.8V and 14.2V, respectively.

And the voltage drop is 0.25V to 0.5V, depending on current.

That link did not work...but really, the exact float voltage is not that critical...the free gassing point of a lead acid battery is 2.37 volts /cell or 14.2 v for a 6 cell battery...

to float the battery you must stay reasonably below the gassing point or there will be considerable water consumption...hydrogen and oxygen

production and heating.

OTOH: the nominal open circuit voltage of a fully charged lead acid
battery is 2.12 volts / cell or 12.7v for a 6 cell battery....

so anywhere from 13.1 - 13.8 volts would work for "floating".

Back in the old days when I started in the industry,
the settings on the chargers could drift a bit...so we'd try to keep
everything in the middle of the accepted range or about 13.5 volts

If the battery is going to be on float for an extended period of time...
though the water consumption is minimal...it still needs to be checked
periodically and topped off as needed (never fill a battery up into the
"neck" area...the water level should be a bit below it)

Finally...a few times a year the battery should be equalize charged to
avoid the possibility of sulfation. Usually 6 hours will suffice.
The battery should be brought up to 14.2 volts and allowed to rise to
approx 15 volts depending on the type of charger

The "Super PwrGate" claims to take care of all phases except equalizing
-- but only for Gel-Cell and AGM batteries. "No Spam" says that the
Iota/IQ system even does regular (weekly!) equalization charges.

I was hoping to find or build something cheaper that could serve as a
controller to make use of one of the power supplies I own already as the
power source.

I'd give one of your power supplies a try and see if it gives you an
acceptable float voltage...

Hey ole timer:

First and formost this is a homebrew group.
To suggest to not build and to buy a commercial of the shelf reay to
use product, is like those sex ads that get posted here, they both
have nothing to do with homebrew.

Lastly I built a flooded lead acid charger. I only bought one part the
IC UC3906, I already had a solderless breadboard, the resistors and
capacitors in my junk drawer
The hardest part was figuring the resistor values and how to make
those values, and that was easy.
The heatsink fan came from an old CPU fan heatsink, and I mounted the
pass transistor to that heatsink fan.
I think that the UC3906 was the best think since sliced bread

I guess it's my (the OP) fault: I cross-posted my original question --
asking about off-the-shelf or homebrew solutions -- to both
r.r.a.equipment and r.r.a.homebrew, and all the responses have gone to both.

I've seen schematics and board layouts for SLA chargers based on the UC3906. VK3EM's uses SMT components, while N5BIA's uses discrete components -- but both are only for charging currents of 2A or so.

For what current did you build yours? If high-current, what pass transistor(s) did you use?

N5BIA offers a kit, and I was wondering whether this could be beefed up to handle 25A by adding 12ga wire to all the charging-current traces and substituting higher-current pass transistor(s). I'd have to recalculate the resistor values to suit a flooded battery, of course. And what about using a P-channel MOSFET device, such as the STP80PF55 that the "Micro M+" uses?

The thing about a low-Rds-on MOSFET, or a low-Vce-sat PNP, is that it really only gains you a benefit under one circumstance: when it's "hard on", acting as much as possible like a short-circuit. This will happen only during the "bulk" fast-charge stage... and only if the charge controller "sees" that the raw (unregulated) power supply circuit isn't capable of pushing more amps into the battery than the design allows.

If the charge control circuit finds it necessary to reduce _either_ the charge amperage, or the voltage being delivered to the battery, in order to charge the battery safely, then the pass transistor will be "partially off". There will be a significant voltage across it (roughly speaking, Vsupply - Vbattery) and lots of amperage, and so it will be dissipating a lot of energy as heat.

At that point, the actual Rds-on of a MOSFET, or the Vce-sat of a PNP, will matter not at all. You'll have to dissipate (Vsupply-Vbat)*Icharge watts of heat in the transistor.

Now, if you happen to have been careful (or lucky) enough in the design of your "raw" power supply, things will look good. By "careful or lucky", I mean that you've put together a raw supply which just happens to run out of "oomph" at exactly the right moment... the effort of delivering 25A into the battery just happens to cause the supply to sag down to the right voltage (equal to a voltage in the range you want to be charging at). Under those conditions, the whole system will be running "flat out", the pass transistor will be turned on as hard as it can be, and heat dissipation in the transistor will be minimized by using a low-voltage-drop transistor of some sort.

However, this approach has pitfalls... it will be finicky to get right (component selection will be difficult) and it will probably be very

sensitive to variations in the AC power-line voltage. In real life, you'd find that much of the time, either you aren't getting the full 25A of charge current (line voltage too low), or the voltage and/or current are potentially too high and the charger is having to back off turn down the pass transistor (at which point there's no longer an advantage to a low-voltage-drop transistor).

If you want to deliver a high charging current, with good control and low losses, under a fairly wide range of conditions, I think you'd probably want to use a different approach... use a buck-mode switching regulator rather than a linear pass-transistor system. With that approach, the pass element would almost always be fully-on or fully-off, and thus there'd be a real benefit to a low-resistance MOSFET or a low-saturation power bipolar part.

I am not sure if this is the best thread for the question but here we go.

Recently I just revamped my scanner listening area and antenna system and I also set things up to now include my shortwave listening. I have an Icom IC-R71a that I bought to replace some none functional radios I had in the past but really only put around 50hrs on it before putting it in storage around 1990. I recently pulled it out of storage and found out it no longer works well. It now has very low audio and barely can hear any broadcast with it. It tunes to stations but almost no volume.

After lots of research and Q&A, It looks like this like new looking radio will cost more to fix then it is worth and I can not even find a service guy to even look at it to find out if it is worth fixing.

Does anyone have any idea who in California and better yet the Los Angles area around Palmdale that could look at it?

I also am considering a new replacement and since I have been out of listening or using SW equipment for a while, I was wondering what is good now days for a replacement radio under $1000 dollars.

Looking for some good input and thanks......

Of course. His kit includes only the PC board and the PCB-mounted components anyway, so I would have to provide my own enclosure and heat sink (well, maybe it does include a clip-on heat sink; I don't recall).

My idea of using a MOSFET was to avoid the voltage drop of a junction transistor so that it could be fed from a regular P/S that has been cranked up only a little -- as with the "Super PwrGate," which has a voltage drop of no more than 0.5V; any idea what West Mountain Radio uses to accomplish that? So Vsupply - Vbattery would be low, and also the power dissipation.

I'm trying to avoid switching-type circuitry, since I already have RFI-quiet regulated power supplies that are capable of supplying the desired maximum voltage and current. It's just a matter of reducing the voltage at the appropriate stages of the charging/maintenance process.

I was looking at the Super PwrGate until WMR's tech guy pointed out that the absorption voltage is too low and the float voltage possibly too high for flooded batteries. If I knew that it used a UC3906 and did not use SMT components I might be willing to try modifying one, but I don't have that information.

There is no design on the internet for charging a flooded lead acid
battery at the levels I use. There is a reason for this it's called
lithium ion cells.

I used to make a living selling NTE parts. NTE always bought the cream
of the JAN type transistors, so they could sub tonnes of transistors
with one number. When the regulator went south on my car alternator I
used a NTE180 to drive the field winding with a zener regulator I
mounted the heat sink right to the positive side of the battery; when
that car died the day the big tsunami hit back on boxer day 2005 I
took the NTE180 out.

I use an NTE180 30 amp PNP transistor and 1 foot of 14 gauge wire to
set up the main charge current, I use a 23amp PS from the filtered

unregulated side to the input of the 14 gauge wire to collector of the PNP. the UC3906 looks at the voltage across the 14ga. wire and directly drives the PNP. I snake the wires for the emitter and base of the PNP thru the heatsink fins. I used the TI data sheet for the UC3906 to calculate the settings for the different charge cycles. The 14 ga wire and the pass transistor are the only off the solderless board parts
I wound the 14 ga wire in a pancake style coil so it fits right over the heat sink

I had to use single turn trim pots and series resistors to set the different charge cycles from the equations provided by the data sheet on the UC3906

I did alot of research on my power supply, the others that used a UC3906 on the internet could not be used to recalculate the resistor values for the UC3906 for a large flooded lead acid battery. There were to many mistakes as I found out.
Using the TI data sheet, is the best way to go, it looks like rocket science but it's easy.\\

Fortunately, the series was immediately picked up by ABC for its eighth season.long-term sitcom was created by Bill Lawrence'Your baby can read DVD' (http://tinyurl.com/65mp5qv) ("Spin City", "Clone High" and "Cougar Town") and the medical comedy series that takes place in Sacred Heart Hospital and focuses on the life of Dr. John JD Dorian (Zach Braff, "Garden State", "The Last Kiss"). JD is an imaginative 'The tribe DVD' (http://tinyurl.com/4mjup6e)mind, so often you see things through his perspective and what he says about himself internally. He works on his girlfriend-and-off again, Dr. Elliot Reed (Sarah Chalke "Clone High," "Roseanne" and "Nothing Too Good For A Cowboy"), which is the same'zumba fitness DVD' (http://tinyurl.com/5tyfy4y) sense of humor as him, his best friend, Dr. Christopher Turk (Donald Faison, "Boondocks," "Robot Chicken") and Turk's wife is a nurse, Carla Espinosa (Judy Reyes, "Third Watch," "The Passion"). And in the workplace, JD has put up with'Prison break DVD' (http://tinyurl.com/48xurkv) Dr. Perry Cox ("Any Given Sunday," "Stealing Harvard", "office rats"), which seems unusual as he and guardian (Neil Flynn, "Middle", " Indiana Jones and the Kingdom of the Crystal Skull ").

Dale-

I suspect your IC-R71a is well worth the cost of repair. The problem could be something very simple, like a dirty contact in an external speaker or headset jack. Try plugging in a speaker or headset into it a few times, and see if that clears up the problem.

Check out Eham for reviews of various repair centers, <http://www.eham.net/reviews/products/26>.

One with a good reputation for Icom is Scott Malcom in Toledo, Washington. His website is <http://www.angelfire.com/biz2/mts>.

I don't know of a specific repair center near Los Angeles. There are Ham Radio Outlet stores in Anaheim, Burbank, San Diego, Sunnyvale and Oakland. <http://www.hamradio.com/> I don't think they do repairs, but perhaps they would refer you to a reliable repair center if you called the closest one.

do thank you for getting back to me but according to the responses from
radio reference is that the radio would need to go through a complete
re-cap due to the age of the radio as well as a new ram battery
replacement. By the time all the money was invested in it, it would cost
$200 to $300 hundred which is about what the radio is worth. I am still
weighing my options but for $600 to $700 i would be able to buy a better
radio that still is supported, I have not been able to find a guy that
would even look at the R71 and this is discouraging....

I will look at some of your recommendation as well but at this time $100 to maybe $200 is all I can justify for this radio that has in the past been criticized for poor audio to begin with....

Dale-

Re-capping applies to antique radios. Since about the 1960s, capacitors have been made using dielectrics that hold up much better over time. That doesn't mean a capacitor isn't bad, but you would NOT want to replace them all. Such a cure could be worse than the disease!

According to RigPix.com, the Icom IC-R71a was manufactured in the 1984 timeframe. Radios of that vintage may have developed dirty contacts in their controls and switches, and the RAM battery is quite old. If yours has the original battery, it is probably time to replace it, but total repair cost should not be as high as you are thinking. At least not with a reputable service center.

The problem you describe does not sound serious to me. I think you would be able to sell the radio on eBay for a fair price, even on a "parts or repair" basis.

I would look at a new Icom or Kenwood receiver as a replacement, but I'm not up-to-date on shortwave receivers. Perhaps someone in the rec.radio.shortwave newsgroup would be better able to recommend a replacement. However that group seems to be overrun with nonsense and spam, so I can understand why you might come here instead!

There is a hidden "gotcha" in the ICOM R-70, R-71 and R-71a, and several tranceivers of the era.

Instead of a ROM chip holding the operating software, it was placed in battery backed-up RAM. The idea being that it would be easy to upgrade the radio at almost no cost.

It turned out to be a bad idea and left many of those radios "brain dead" when the battery died and the programing was lost.

Someone used to sell a replacement ROM chip board that would go in instead of the RAM chip board. I have no idea if they still do.

So not only would the radio need a new battery, it would need to have the RAM reloaded if the battery has already died, or replacement with a ROM chip.

If the battery is still good, there is a way of replacing it without losing the contents of the RAM.

In defense of ICOM for something that seems insane by modern standards, the battery lasted for almost 25 years. It may be planned obsolesence, but they were awfully patient. :-)

Great call there Geoff. I believe there is a group for this receiver on
Yahoo. Or maybe an Icom group, where he could get this fixed/ up to
date. It was an above average radio in it's day, and I hate to see
a receiver die. Lots of Ham and techs who fix radios just for fun.

It's been a few years, but in the past Icom has kept at their web site
tech sheets that describe problems and solutions for much of their
older equipment.

Try:
http://www.icomamerica.com/en/support/kb/Default.aspx

I see a number of references to various audio problems for the R71.

If it's just a low audio thing you have, it's possibly an easy fix
for you or a decent technician.

Thanks, I have seen all the information on the Icom site and I have also contacted Kiwa as well on this issue. Kiwa thinks it could be bad caps but money is tight at this time do to me being out of work for two years.

The other day I attempted to change the ram battery and made a big mistake due to the fact I did not put my glasses on. I ended up hooking up the negative wire to the wrong solder point next to the one I was supposed to hook up to and damaged the ram board. I really felt like a real bone head and kick myself in the but for not double checking things.

I have a new board coming from one of the aftermarket companies to at least get the radio back to where it was before the bonehead move. If all is good I will then try to work on the original problem....

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

If the government is serious about penalizing sex offences, why not change the laws so high-risk, sex offenders with no chance of rehabilitation have longer jail terms than drug dealers.The current maximum term for sexually molesting children is 10 years. Pot dealers can get life imprisonment.I can sympathize that there is a lot of terminology many people haven’t come across, and it’s fair for the Conservatives to ask for definitions in the bill. I'm not familiar with the receiver you are talking about but many of the
recent models of radio-ham gear today have on-board computers for
frequency and other control. That includes backup data/clock batteries
which hold more programmable information than most people are aware of.
I learned the hard way that this can get screwed up even if you do
nothing. I've had two pieces of gear that have changed certain behavior
since a prior time of use. Before you consider drastic action, look for a
"reset" button or a "reset hole" (big enough to push in a paper clip bent
to allow one end of the paper clip wire to be pushed into that hole. It
might be in back or under the rig. Even some laptop computers have this.
Check your manual or download a fresh copy if available off a website.
Most of the manuals I have for my gear have --way at the end--a page on
"setting to factory default" which is what you want.

Sometimes the "reset to factory default" involves a very specific "turn
on" instruction (instead of a paper clip insert to push a switch). For
example, it may say to hold down a certain button then push the "power-on
button" to do a reset.

I had a 2 meter FM transceiver that did not do certain things and I ended up selling it to a friend after explaining the problem, and then he told me some weeks later about the "reset" trick, and he got everything to work just fine.

Also, I have a Grundig G5 SWL receiver (all digital) and it has the reset hole on the front panel. So far I've had to do a reset about three times. And, interestingly, the problem is like yours; when I turn on the receiver, the audio volume is very low. After I do the reset, it behaves normally. Of course, this might blow all of your memory data, too, but I don't use them.

One rig I have even has levels of reset that you can opt for.

Good luck.

Hello,

I was wondering if anyone could help me dig up a bit of information on a Motorola MTX838 Model B3 portable radio. Despite having the operations manual for this radio I can't seem to decipher the technology of the radio.

Is this a 800mhz or 900mhz type radio? I see that on the front of the manual it does state "Privacy Plus" and within the pages makes mention of trunking technology, is it safe to say that this radio is capable of trunking?

Any insight would be appreciated on this.

Thanks.

I am a recovering Windows victim. I have "hit or miss" results with that dongle on Linux. I am using an ancient Belden Palm Pilot Dock Adapter USB-to-serial, but the LEDs on it make radio noise. Not enough to disrupt comms, but it's there and it bugs me.

It is supposed to be PL-2303, but it doesn't work with the PL-2303
Prolific Download Drivers, but works with provided driver that is labeled
PL-2303 in Windows 98/XP.

"General coverage receiver" is the magical keywords you're looking
for. Yes, they do exist. The Kenwood TH-F7E is one that comes to
mind, able to do 100kHz (with suitable antenna plugged in) right up to
1300MHz receiving AM and FM. It was able to do SSB and CW up to about
450MHz, and WFM down to about 40MHz. I think Icom have a handheld
with similar capabilities. The Yaesu VX-7R can do likewise, but only
AM, FM and NFM, not SSB or CW.

These can all transmit on 2m/70cm, and the VX-7R can transmit/receive
6m as well. VX-8R I believe does AM transmit in addition too.

opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of

This would include establishing contact with the original maintainer for

Just off hand, I'd say it was just as legit as obamas' birth certificate
qualifying him for the public servant position of president!

If that works for obama, should work here!

What wouldn't be legal about this (unless it's "hot"), at least in the
ham radio world? Freeband, well that's a different story ;)

I would have said that this way, "Yes! They are publically owned
airways. However, don't get caught enjoying your freedom! They will
imprison you for that, this is America, yanno'?"

Perhaps, expressing a bit of over-emphasis on the freedom thing ...

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Want to buy: Cable for Multi-Elmac M-1070/AF-68/PMR-8
This is a 3 headed cable. 11 pin "octal", 10 pin Jones plug, and 15 pin
Jones plug.
I'll buy separate ones and join them, if that's the best I can find.
The separate ones would be either, 11 and 10, or the 11 and 15.

I'm interested in getting several of these filters (for the 75A4):

500 Hz, anything between up to but not including 3.1 kHz.

Need sources, prices.

Make reply post or send private email to the source of this post

Rockwell-Collins still makes the size J filters. From the 2005 catalogue:

NSN Type Bandwidth
526-9089-000 F455J-31 2.8
526-9091-000 F455J-60 5.5
526-9154-000 F455J-05 0.38
526-9155-000 F455J-15 1.2
526-9156-000 F455J-21 2

You can also make adaptors out of perfboard to fit the PC board mount
filters onto a socket, if you find them at a hamfest.

Otherwise try collinsfilters@rockwellcollins.com.

Does 'better' mean tighter or less ringing?

There are sure times when I wish I had a less nasty-sounding filter for

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

I'll have to put on my "to do" list that I need to search the web for sources of these filters (as well as ER magazine). And, see if Collins has a website of their own (I should have done that, too, but I have variable lazyness...and I'm not in a big hurry on this project).

I did send to that Collins email address a request for further information and have not, as yet, received an answer (I notice email responses to email queries can be all over the spectrum from minutes later to days later to no answer at all).

For a nice-sounding CW filter, I have used an audio frequency equalizer (picked up mine from a thrift store for $5, its a Realistic [Radio Shack] jobber). I max boost 500 Hz sliding pot on both channels, and max depress the pots on all other frequencies, and feed speaker output into input of one channel, output of that channel into input of the other channel, and run output of other channel into input of an amplifier driving either a speaker or earphones. Bandwidth "sounds" (not measured) like maybe about 300-400 Hz. The next frequencies above and below 500 Hz are 250 Hz and 1 kHz. I might get narrower if I boost at 250, etc, but tone is too low for my ears. I thought I wasn't getting any detectable ringing at all on this setup. The calibrations are max/min 12 db, so that should put unwanted frequencies down 24+ db per channel, or 48 db for both, no?

Scott, for AM on the R-390: are you sure its the filter? Not distortion in the audio string? Have you tried any other post detection path (eg. a separate receiver, even an old AM radio where you feet the 455 kc output from the R-390 to the input of the IF on the AM radio and see what audio

quality you can get? I'm not familiar with the R390 (does it have mechanical filters?).

You might try setting the filters on the two ears a little bit different,
so that higher tones are to the right and lower tones are to the left. I
find this helps pick out signals from a pileup.

The filters on those cheap EQs are probably fairly wide; you can measure the
Q with a meter and a signal generator if you want to really know.

There is lots of distortion in the audio string, although the line output
is definitely much cleaner than the speaker level output. However, there is
just outrageous amounts of ringing on the 8KC filter. If I go to the 16 KC
filter it's much cleaner but of course there's a wider bandwidth too.

FWIW, I have an F 455 J 31 in front of me that I'd be happy to part with for any reasonable payment. As far as I know, it's in good condition, removed from (if I'm not mistaken) a Collins 490T HF avionics transceiver. I'd be happy to check it on an HP8753ES network analyzer to insure it's OK, if I find info on pin connections and in/out matching to the analyzer's 50+j0 ohms. I gather this is the one you _don't_ need, but perhaps someone else does. (Looks like probably pins 1&2, and 6&7, are the in/out...9 pin miniature tube base.)

Tom

Just purchased a new Yaesu FTdx-5000D HF rig. Compared to my previous rig (IC775DSP) this monster has a very rich set of menu items.

Does anyone know of an application to groom this radio (manipulate menu settings, fill memory slots, etc). Reply direct, as I don't get on USENET much.

Disconnect the antenna. Does the static stay the same or get lower?

Meanwhile check the RF gain control, and filter switch.

Could perhaps be any of a number of things, from a blown receiver
front-end (lightning or electrostatic damage?), a loose
connection, defective or loose IF filter, or any of a number of
mis-adjustments in the control setting.

The first thing I'd try, with that radio, is a microprocessor reset of
the "Reset everything but the memory channels" variety. Turn the
radio power off, hold down A/B, turn the power on, wait a few seconds,
release A/B. This should reset the radio to its default operating
modes... if you'd accidentally switched some weird setting into some
oddball mode, this should reset it.

If you're still stuck in a "Can transmit but cannot receive" mode,
it'd then probably be time for some signal-tracing inside the radio.

You didn't mention the amp in your original posting. Hard to diagnose
things accurately, at a distance, when one doesn't have a full picture
of the setup in question.

Sounds as if the amp's transmit-switchover relays are bad, or are
being improperly keyed by the radio. The amp's supposed to leave the
antenna connected directly to the transceiver, except when you key up
the transceiver.

You'll want to check the relay's signal continuity (and be VERY VERY
CAREFUL about how you do this... an amp of this sort has lethal
amounts of power present inside it when turned on, and for quite some
time after it's turned off!), and also the PTT-keying connection from
the transceiver to the amp.

I have a vague recollection that some radios, and some amps, can
interact badly, especially if misconfigured (e.g. if the transceiver
isn't told it's controlling an external amp or has the wrong transmit
delay time setting). If the transceiver starts transmitting before
telling the amp to switch over, or with an inadequate amount of delay,
the amp's relay may open or close while transmitter power is flowing
through it. This can cause the contacts to arc, burn, and possibly
even stick.

It's possible you need a replacement relay in the amp, *and* a setting
adjustment on the TS-450 to tell it to increase its TX delay.

193. 2304 transverter for sale

I just built and tested a DEMI 2304-144 transverter and it is now for sale. Set up for 9.3W in at 144 MHz and gives 1.00W at 2304. The receive sensitivity is good, with my 2304 MHz signal at -85 dBm giving S8 to S9 on my FT-857 IF radio. Unit is built with common IF in/out, split TX/RX at 2304 and requires a 10 MHz source for the synthesized L.O. Switch is installed for dual frequency operation, but is not wired. By wiring this switch, you can select between 2304 and one other frequency - 2320 or 2424 MHz (NOTE: 2320 is NOT an authorized TX frequency in the USA, but 2424 is). No T/R relay included, but unit is built to work with standard 24V SMA relays. Photos of transverter on the ham radio page at my website below. Unit has been tested at 2304 MHz only.

Price: $495.00. Save yourself 5 bucks and 18 weeks of your life (DEMI's quoted lead time for factory built units). $15 shipping to CONUS, $25 shipping to Alaska or Hawaii. No International shipping, sorry (too much money and too much friggin' paperwork!

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Determine the requirements and start plugging in assorted generic transistors. You'll get lucky quick. What does it do? Switch? Small signal amp? FET RF Amp?

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Hi,
I have a big self supporting tower in the yard, it is grounded by grounding rods and of course itself. I am attaching two satelite dishes to the tower. The most practical way is using 2x4 wood, this will work great just screwing them to the wood and it will squeeze itself to the brackets and support nicely. I am wondering about the connection to the tower because there will not be grounded to the tower. There wont be any connection (metal to metal) form the satelite dish and the tower, that leads me to believe that the only grounding would be the shielded cable which gets grounded to the nice new 50" plazma.

My question is should i ground that? Should the satelite dish itself be grounded to the tower? Is there any reason for this? Safety wise or interference wise? It would be very simple to do, but not sure if I should or want to. Please give me advice as to either ground the dish to tower or not to. Does anyone think there will be issues? Should I or shouldn't I?

Thanks for any advice.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team has decided to consider
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. We are currently trying
this on a temporary basis (90 days, through early July 2009), and adopt
it permanently if successful.

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

237. SDR recommendations?

Newsgroup: rec.radio.amateur.equipment

From: Ted Ham <rexxhat3405@adl.com>
Message-ID: <j6anmm$49j$1@dont-email.me>

After the prior post mentioning SDR radios, and me seeing how they work withe the web radios, I am now intrigued by the concept. There are several DIY and assembled brands used, with SoftRock being among the best price. However, SoftRock does not appear to be available at this time and several other brands may be "retired" as well.

What would be recommended? I don't want to spend a fortune, but still want decent quality, preferably covering the HF bands. SSB, AM, FM. I see a brand called Elektor SDR offering assembled kits under $150 US. However, some people have problems with setup and a weak receiver. Now they have a preamp for another $75 or so.

Appreciate any thoughts on the subject.

Thanks,
Ted Ham

Hi, folks.

I have several Icom 745 radios. I need flat, flexible cable to make up for them. The maximum conductors are 11 but I can slit more to make 11. The spacing is .060 x .060. I have worked with a lot of cables as I am an nnnjineer but never this type of Mylar? cable other than plugging it in or out.

Any suggestions other than asking Icom would be appreciated.

Thank you.

248. Comet CAA-500 thread incompatibility

Newsgroup: rec.radio.amateur.equipment

From: Johnno <vk2kc@yahoo.com.au>
Message-ID: <j8874enjm1@dont-email.me>

I bought a CAA-500 from a reseller in the USA and have found a problem with the lower frequency input connector, its supposed to be an SO-239.

More on the incompatible thread issue.

I have been in contact with Comet in Japan and they had admitted that the connector will NOT fit the US standard PL-259 connector. They HAVE used the 16mm x 1 mm pitch thread, they call it an International Thread! All PL-259's have a 5/8" x 26 threads per inch pitch.

Here is a copy of the email sent to me regarding the incompatibility of the threads on the lower frequency connector.

Hello Mr. John,
Thank you very much for purchasing our CAA-500.
The CAA-500 first lot does not have international standard connector.
From the second lot, which will be released on NOVEMBER 2011, we change the CAA-500 connector so that PL-259 connector will screw onto the CAA-500 M-J connector completely.
Would you please so kind as to send your CAA-500 back to us?
I will send you the new one with international standard connector, then.
We deeply apologize for the inconvenience we have caused you.
We hope that you will continue to choose COMET products.
Sincerely,
Mika Yagishita

So ALL CAA-500's sold in America WILL have the WRONG thread on the low frequency connector.
Contact your supplier, and I hope you get a better response that I received from the supplier I bought mine from in the USA.
DO not force your PL-259 on the connector, it will damage the thread and render your warranty null and void.

I have relented and spent $70 Aust to send the CAA-500 back to Comet in Japan, along with a sample of a PL-259 so they can check it on the replacement unit before they ship it back to me.

Here is the second email I received from them:

Hello Mr. John,
Thank you for your reply.
Our exchange policy is;

the customer covers the freight fee to COMET, then COMET will offer the new one and cover the freight fee to the customer.
Technically, this is not our mistake because we don't think it's wrong connector.
We usually do not make connector international standard, because we don't feel the need to do that and our distributors purchase our product with this understanding.
From second lot, we decided to make CAA-500 connector international, not because the connector is wrong, but because lots of oversea customers request international standard connector.
We usually exchange the CAA-500 because we think it's true that our product does not satisfy the customer anyway, even not by our mistake.

Please send your CAA-500 to;

Well I thought of that too, was going to use a Type N as a replacement, but decided against that line of action.

Make an adaptor? I am a fitter and machinist, and so had the appropriate thread turning gear including a lathe, but an adaptor would be a very clumsy way around the problem and thinking about it and figured that it may interfere with the calibration, and once I opened the box, warranty is non existent.

I also figured that if I sat on the information, many of you would not be aware that there is a problem with the thread sizes.

Thank you for being considerate and passing the the info along.

I confess to taking the easy way out most of the time so I
automatically think of some kind of hack to manage a workaround.

I have used a a short length of copper tubing and a slightly longer
piece of 1/8" wire or brass tube to adapt worn out PL259's to quick
service. Slit the tube a little and squeeze it for fit. Sometimes use
a stainless hose clamp. Not a "fix" but a workaround for the moment.

Once upon a time a trustworthy manufacturer put out a bunch of PL259
male connectors with out of spec threads. In my case, the antenna
connectors sufferred the most.

Your way is of course, the best way for the future use.

Thanks for your encouraging reply John, I have since found out that the Japanese call the PL-259 an "M" connector, and the metric version which I believe is used universally in Japan is called the "M-J" connector. Presumably the "J" for Japan.

I think about 10 or so years ago MFJ put out a lot of equipment, especially
their tuners that had the wrong for America threads on the SO-239s.

One would think that the companies would have corrected that by now.

Hi;
I'm a newbie with a question please;

On small personal am/fm walkman type radios, most volume controls are a wheel imbedded into the top or side that I take it is attacked to plates inside the radio.
My question concerns this wheel.
No matter how much I spend on these radios after a while they all become static loaded as volume is changed with the wheel.
I take it this is dirt and dust collecting between the plates. I've tried blowing air along the sides of the wheels to clear the plates. I haven't tried any sprays as yet.
Is this a well known issue with these volume wheels and if so is there anything at all that will work to clean these wheels?
Blowing on them is iffy as they are very tight on the radio and not much room on the sides for the air to get inside and do the job.
Can someone in the know advise on this problem please, and thank you very much for your time in answering what to many here must be a very basic question :-))

Yes, most likely dirt, although it may also be worn out. TV tuner cleaning spray can be tried. It comes in a spray can and usually has a plastic "straw" that attaches to the spray head so you can direct it into any small opening in the potentiometer (the volume control). Spray a bit in there and rotate the volume knob several times over the full range of the control.

After a 30-day public discussion and feedback period to gauge reader
opinions in March of 2009:

http://groups.google.com/group/rec.radio.amateur.moderated/browse_thread/thread/d7d337db35
f23326

the rec.radio.amateur.moderated Moderation Team had decided to consider |
amending its charter, and permit limited simultaneous crossposting to
rec.radio.amateur.moderated and one other unmoderated
amateur-radio-related discussion newsgroup. After a successful trial |
period (90 days, through early July 2009), we decided to adopt this |
change permanently. |

Approved rec.radio.amateur.* newsgroups are those that are currently
listed in the latest version of the "List of Big Eight Newsgroups" which
is crossposted monthly to news.announce.newgroups, news.groups, and
news.lists.misc.

Approved alt.radio.amateur.* and alt.ham-radio.* newsgroups are those
that have been created consistent with the suggestions in "So You Want
to Create an Alt Newsgroup" at:

http://www.faqs.org/faqs/alt-creation-guide/

Approved regional hierarchy newsgroups are those that contain either
"radio.amateur" or "ham-radio" in their names, including
uk.radio.amateur and aus.radio.amateur.misc.

We will make every reasonable effort to keep our list of approved
newsgroups up-to-date. In case we have overlooked any, and a submission
is rejected in error as a result, the rejected submitter can E-mail us
at our administrative contact address (in the signature at the bottom of
this article, and the default Reply-To for the rejection message)
requesting that it be added, and that the article be approved. We may
still choose to reject articles crossposted to any alt.* newsgroup with
an inappropriate name, including obscene language, embedded
name-calling, or encouragement of unlawful conduct.

Hi Ted,
Try googling Funcube dongle.This has got to be the best thing sinced the invasion of jap radios.Covers approx 64Mhz to over 2Ghz and there is an up converter to cover the HF bands. Costs under $200 excluding the converter. It just plugs into a USB port of a computer.Has also got it's own soundcard. If you get one i'm sure you won't be dissapointed.

278. Icom IC-9100 - Unknown Device

Using a new Icom IC-9100, I'm getting "unknown device" when I
connect the USB cable to my computer. I'm running 64 bit version of
windows 7 ultimate.

Before I connected my radio to the computer, i installed the USB
drivers downloaded from ICOM, and rebooted, then connected IC-9100
using the USB cable and turned the IC-9100 on.

I have even tried updated driver from
http://www.silabs.com/products/mcu/Pages/USBtoUARTBridgeVCPDrivers.
aspx

I'm still getting Unknown Device in windows device manager. I tried
to reboot and reconnect, but nothing works.

Anyone have a solution to this problem?

279. BMI Nitelogger tape recorder controller operating voltage (?)

Perhaps someone could help.

I have an old (1990's) BMI Nitelogger (II?) and need to know the voltage used by this device. I have a Condor 9 volt 9 watt supply that I think may have been originally included with it, but am unsure and don't want to burn it up testing.

Have several different possible "wall warts", thus my problem.

Thanks.

Have you checked out Amateur Electronic Supply (AES) or Ham Radio
Outlet (HRO)? Don't know CO sales tax laws but some states do not tax
on-line sales if the sale originates out-of-state.
http://www.aesham.com/

Also, join the Yahoo FT-857 group. Someone there may have one for
sale, though it will be used.

The Controller has power, the fuse is good,the light's work. It,s stuck at 80 Degree's from true
North.

But

The rotor will not turn!

Is there anything else it could be other than the Rotor or the 8 wire cable.

This unit is less than 1 year old.

Thanks for your time.

It might help to know the model in question.

Some things to check are the continuity of the wires to the motor windings, and whether there is a purely mechanical jam. Finally, most/many rotors have a phase shift capacitor between windings. If they fail open, everything will look fine, but the rotor will not develop enough torque to turn the antenna.

289. grundig or eton model (grundig) 750 satellit

Can someone explain the differences between these two?

Was the Grundig version made when Eton aquired Grundig, just still badged Grundig?

I've read a couple of informative reviews on the Eton, I think it mentioned maybe the way stations locked in or something about separation? Seems to be a fine radio.

On Ebay and maybe JR's it seems the Grundig is about $100.00 more. The Eton sells for around $260. Is the build quality that different? I have read that the size of the Eton can be attributed to the Vintage look, that it didn't really need to be the size that it is. Is the Grundig model heavier or comparable build quality?

Any answers to this are welcome and appreciated, thank you.

Best regards
